

Optional Tilt Canopy and Stainless Steel Frame

Vulcano and Basic Offset Canopy Tilting Mechanism

This tilting mechanism allows up to 45 degree inclination of the canopy thus controlling your shaded area.

It is very easy to use and is made totally from stainless steel allowing the arm to easily glide and adjust the canopy to the desired inclination.

At this time it is available by order only for our Vulcano and Basic models in sizes 10x10 and 10x13.

Vulcano and Basic Offset Stainless steel Option

This is an option we are offering at this time for our Vulcano and Basic Offset Umbrella models.

The whole structure is made from #306 stainless steel making it rust resistant.

The ribs in the canopy are made from aluminum as well as all other nuts and bolts. *with the exception of the winch mechanism and base leveling screws which will also be in stainless steel in the near future.
